Trauma Psychiatry Clinic

General Practitioners Information Sheet

About the Service

Phoenix Australia is the Australian National Centre of Excellence in Posttraumatic Mental Health, a University of Melbourne affiliated non-profit & the developer of the NHMRC Posttraumatic Stress Disorder (PTSD) treatment guidelines. We offer a <u>bulk-billed</u> Trauma Psychiatry Clinic where patients who have or are suspected of having PTSD can obtain an assessment and treatment plan. Where appropriate and according to capacity, short term follow-up care (up to six months) is also offered. Most clients will be seen by a senior registrar (trainee psychiatrist) under supervision.

PTSD has a 12-month prevalence of 4.4%, making it the second most common psychological disorder in Australia. However, the diagnosis is often missed and even when diagnosed many do not receive evidence-based treatment. The clinic aims to address this gap.

PTSD Screening tool

1. Sometimes things happen to people that are unusually or especially frightening, horrible, or traumatic. For example a serious accident or fire; physical or sexual assault or abuse; seeing someone be killed or seriously injured or having a loved one die through suicide. Have you ever experienced this kind of event?

If yes:

2. Had nightmares about the event(s) or thought about the event(s) when you did not want to?	Yes	No
2. Had flighthlates about the event(s) of thought about the event(s) when you did not want to:	163	140
3. Tried hard not to think about the event(s) or went out of your way to avoid situations that	Yes	No
reminded you of the event(s)?		
4. Been constantly on guard, watchful, or easily startled?	Yes	No
5. Felt numb or detached from people, activities, or your surroundings?	Yes	No
6. Felt guilty or unable to stop blaming yourself or others for the event(s) or any problems the		
event(s) may have caused?	Yes	No

Interpretation: >3 = probable PTSD; but if YES to Q1 & clinically concerned, please refer to us for an assessment & plan.
